A multiple cloning site is inserted into pMH28 to give plasmid pMH29 (AMT2873), and a mutant firefly luciferase (EC-1.13.12.7) reporter gene is inserted to give plasmid pMY30-lux (AAT28278). This type of vector may be used in a new method for quantifying Mycobacterium infection in vivo. An animal is injected with e.g. Mycobacterium bovis BCG, etc., transfected with one of these vectors, and reporter gene expression is detected by luminescence in tissues without lysis or cell concentration. The method may be used to determine the efficacy of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Quantification of mycobacteria by luminescence - using reporter strains contg. a lux gene, permits the determn. efficacy of anti-mycobacterial and prophylactic compsns.

                                                                                                                                   밁
                                                                                                                                                                                                                                                                                   This is the complete sequence of plasmid pMH29. This plasmid has been constructed by inserting a multiple cloning site and an Escherichia coli TIT2 terminator sequence into plasmid pPA207SC, based on plasmid pMY206 (AAT28281), to give plasmid pPA207SC, and insertion of a multiple cloning site to give pMH29. A mutant firefly luciferase (EC-1.13.12.7) reporter gene is inserted to give plasmid pMY30-lux (AAT28278). This type of vector may be used in a new method for quantifying Mycobacterium infection in vivo. An animal is injected with e.g. Mycobacterium bovis BCG, etc., transfected with one of these vectors, and reporter gene expression is detected by luminescence in tissues without lysis or cell concentration. The method may be used to determine the efficacy of antibiotic, tuberculostatic and vaccine compositions.

This type of vector may be used in a new method for quantifying Mycobacterium infection in vivo. An animal is injected with e.g. Mycobacterium bovis BCG, etc., transfected with one of these vectors, and reporter gene expression is detected by luminescence in tissues without lysis or cell concentration. The method may be used to determine the efficacy of antibiotic, tuberculostatic and vaccine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2502
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2382

                                                                                                                                                                                                                                                                                                                                                                                                                                           This is the complete sequence of plasmid pMH30-lux. This plasmid has been constructed by inserting a multiple cloning site and an Escherichia coli TIT2 terminator sequence into plasmid pPA2075C, based on plasmid pMY206 (AAT28281), to give plasmid pHH28 (AAT28272) and insertion of a multiple cloning site to give pHH28 (AAT28273). A mutant firefly luciferase (EC-1.31.12.7) reporter gene, with an Ile ATA codon (rare in mycobacteria) changed to ATC to enhance expression, is inserted to give pMH30-lux. The vector is expression, is inserted to give pMH30-lux. The vector is expression levels are very high from the hsp70-tac promoter. Although levels of transformants are low, type of vector may be used in a new method for quantifying Mycobacterium bovis BCG, etc., transfected with one of these vectors, and reporter gene expression is detected by luminescence in tissues without lysis or cell concentration. The method may be used to determine the efficacy of antibiotic, tuberculostatic and vaccine
                                                                                                                                                                                                                                                                                                                                                                   Matches

This is the complete sequence of plasmid pMV206. This plasmid may the has been used in construction of vectors for use in Mycobacterium to spp. The plasmid may be modified to construct plasmid pPA207SC, to followed by insertion of a multiple cloning site and an Escherichia coli TIT2 terminator sequence, to give plasmid pMH28 (AAT28272) and its derivative plasmid pMH29 (AAT28273). A mutant firefly luciferase (EC-1.13.12.7) reporter gene is inserted to give plasmid pMV30-lux (AAT28278). This type of vector may be used in a new method for quantifying Mycobacterium infection in vivo. An animal is injected with e.g. Mycobacterium bovis BCG, etc., animal is injected with one of these vectors, and reporter gene expression is detected by luminescence in tissues without lysis or cell concentration. The method may be used to determine the efficacy of

This is a plasmid containing sequences necessary for replication in mycobacteria. It contains a synthetic multiple cloning site to facilitate versatile molecular cloning and manipulations for foreign gene expressions in mycobacteria and for integration into the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Expression vector for expressing protein or polypeptide in mycobacterium - contg DNA sequences encoding lipoprotein secretion signal and peptide heterologous to bacteria expression protein of lipoprotein heterologous to bacteria

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents that of plasmid pMV101. This is a modified version of plasmid pVUB125, which had 792 bases of the tet gene (inactivated by prior manipulations) deleto. The plasmid represents an expression vector. The HSP61 coding sequence was inserted between the NheI and BamHI sites to form pMV65A. NOTE: When the proteins encoded by this sequence were decoded, the published sequence was found to contain approx. 65 codons which did not code for the amino acids dictated by the universal genetic code. The sequence also contained many insertions and deletions which upset the open reading frame that was displayed as the contain proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Expression vector for expressing protein or polypeptide in mycobacterium - conty DNA sequences encoding lipoprotein secretion signal and peptide heterologous to bacteria expressing

                                                                                                                                                                         This sequence represents that of plasmid pMV101. This is a modi-
version of plasmid pYUB125, which had 792 bases of the tet gene
(inactivated by prior manipulations) deleted. The plasmid
represents an expression vector. The HSP61 coding sequence was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAQ31743
                                                                     inserted between the NheI and BamHI sites to form pMV65A.

NOTE: when the proteins encoded by this sequence were decoded, the published sequence was found to contain approx. 65 codons which did not code for the amino acids dictated by the universal genetic
                                                                                                                                                                                                                                                                                                             Example 1;

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPC1-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and library colleges the same strain used for the BDGP's pl and EST libraries. Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                     CNS012I3
645 bp DNA linear GSS 26-JUL-1:
Drosophila melanogaster genome survey sequence T7 end of BAC
BACN08C07 of DrosBAC library from Drosophila melanogaster (fruit
fly), genomic survey sequence.

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department o Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BBGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BBGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Canacias at the Roswell Park Cancer Institute in Buffalo,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   42;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the Isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

                                                                                                                                                                                                                                          /note="Vector: pBluescript II XR; Site_1: EcoRI; Site_2: XhoI; This cDNA library was constructed from mRNA isolated from whole seedlings of 2-3 week old greenhouse grown plants. The cDNA library was prepared using the Stratagene pBluescript II XR cDNA library construction kit. Complementary DNA was synthesized from mRNA using a primer consisting of a poly (dT) sequence with a XhoI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA fragments were directionally cloned into the EcoRI-XhoI restriction
                                                                                                                           Erpelding."
                                                                                                                                                                                                  site of the pBluescript vector. The ligated cDNA fragments were transformed into XL10-Gold host cells. This library

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CNS01087 961 bp DNA linear GSS 26-JUL-1999

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CNSULKED 1100 bp DNA linear GSS 26-JUL-1999 Drosophila melanogaster genome survey sequence SP6 end of BAC BACN16D22 of DrosBAC library from Drosophila melanogaster (fruit

                                                                                                                            Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Razutoyo Googawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library, or filters for hybridization from the BACPAC Resource Center can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ATAAAATAATATTTTWWWTATTAATT
